THIS IS NOT A SUMMERTREE RECREATION FACILITY SPONSORED EVENT  
AND IS NOT AFFILIATED WITH THEIR OFFICE. THIS IS OPEN TO ALL RESIDENTS TO ATTEND

# KNOW YOUR HAZARDS

# HURRICANE

## BE PREPARED!

### AWARENESS

Over the past 200 years, research estimates that 1.9 million people have been killed by hurricanes, which kill more people than any other type of storm. Pasco County has been directly hit by 34 tropical cyclones since 1872 and has responded to 37 others within 50 miles.

Hurricane Helene tracked 100 miles off the coast of Pasco County in 2024. Storm surge causes devastation, damaging over 9,000 structures and leaving around 29,000 without power.

**Hurricanes form in warm tropical waters, producing violent winds, waves, rains and flooding.**

Hurricane paths can be predicted but are influenced by changing weather patterns.

### TO DO LIST

- ✓ Make a family plan—who does what and where will help your family ride out the storm.
- ✓ Locate your water meter and electrical shutoff.
- ✓ Check with your child's daycare or school to find out about their disaster plans.
- ✓ Trim trees and store loose objects.
- ✓ Install or test your smoke detector.
- ✓ Use a camera to record your home and share video with friend or family member who lives out of town.
- ✓ Photocopy important papers and store safely.
- ✓ Prepare "to-go" items for your pet if you plan to go to a shelter.
- ✓ Obtain cash.
- ✓ Prepare a "go-pack" in case you need to evacuate.
- ✓ Establish an out-of-state contact person to call in case of an emergency.

### THE SCIENCE OF THE STORM

Florida experiences about 40% of all hurricanes that make landfall in the U.S. While the storm itself typically lasts 12–24 hours, its effects can persist for days. Wind and rain may start before the storm arrives and continue afterward. A hurricane begins to break apart upon landfall but can remain dangerous if part of it stays over water, maintaining its strength and causing flooding and higher storm surges.

### THE EYE OF THE STORM

The hurricane's center, or eye, is calm. Surrounding it is the eye wall, a ring of clouds with high winds and heavy rain, often the most destructive part. The northeast side is the most likely to cause damage due to tornadoes, high rainfall and storm surges. **NEVER** venture outside if you're in the eye of a storm.

Hurricanes can be unpredictable. For updates, visit: [Weather.gov](https://www.weather.gov)

# HURRICANE SEASON

**JUN 1**  
**NOV 30**

## 2026 ATLANTIC TROPICAL CYCLONE NAMES:

- ARTHUR
- BERTHA
- CRISTOBAL
- DOLLY
- EDOUARD
- FAY
- GONZALO
- HANNA
- ISAIAS
- JOSEPHINE
- KYLE
- LEAH
- MARCO
- NANA
- OMAR
- PAULETTE
- RENE
- SALLY
- TEDDY
- VICKY
- WILFRED

**YOU WILL RECEIVE A WARNING!  
FOR A TROPICAL STORM OR HURRICANE**

### EVACUATIONS

If county officials issue an evacuation order for your area, it is highly recommended that you heed these instructions. Emergency officials may not be able to get to you during the storm. This order is released in an effort to help you take necessary precautions. You should begin your preparations to protect your safety and belongings. To see if you're in an evacuation zone, visit: [MyPas.co/Map](https://www.mypas.co/Map)

9-1-1 may not be available if communications are damaged during a storm. You may find yourself in a situation where help cannot reach you. One plan is never enough. Always have a backup plan in the event the path or structure of the storm changes.

### BUSINESS OWNERS

If you own a business, follow your Business Continuity Plan. For more information on how to create a Business Continuity Plan, go online to:

[DisasterSafety.org](https://www.DisasterSafety.org)

[FEMA.gov](https://www.FEMA.gov)

[FloridaDisaster.org](https://www.FloridaDisaster.org)

[Ready.gov](https://www.Ready.gov)

## BUILD UP YOUR HURRICANE KIT

Be ready for any emergency that might happen. It's an easy way to stay prepared!

### STORM SCALE

#### SAFFIR-SIMPSON HURRICANE WIND SCALE

Tropical Depression	< 38 mph
Tropical Storm	39-73 mph
Cat. 1 Hurricane	74-95 mph
Cat. 2 Hurricane	96-110 mph
Cat. 3 Hurricane	111-129 mph
Cat. 4 Hurricane	130-156 mph
Cat. 5 Hurricane	156+ mph

### HURRICANE WATCH

Predictions have determined that your location is in a possible path of the storm within the next 48 hours. Have a plan in place if the WATCH becomes a WARNING.

### HURRICANE WARNING

You are in the projected path of the hurricane. A WARNING will be issued to the affected areas 36 hours in advance. All hurricane watches and warnings are issued by the Hurricane Center.

# Know Your Hazards

## SUBSIDENCE

### AWARENESS

A subsidence is a common, naturally occurring geologic phenomenon. Also referred to as a sinkhole, or a depression, a subsidence is a hole in the land surface. The hole can be shallow, deep, or wide. They are the result of limestone under the surface dissolving in acidic water.

### IMMEDIATE ACTION

If you believe you have encountered a depression, a sinkhole, or a subsidence, call 9-1-1.

Notify the call taker if you or others are in immediate danger. Let them know if any buildings or infrastructure are affected (i.e. houses, buildings, roads, sewer/water lines, cable, etc.).

#### Is it on public property?

If it is on public property, the county will arrange for professionals to assess damages and survey the land. If repairs are necessary, the county will be responsible for making those repairs.

#### Is it on private property?

If it is on private property, the owner of the home or business is responsible for repairs. They will need to contact their insurance company to send out engineers and other professionals to assess the damage.

### FORMATION OF A SUBSIDENCE

Excessive rainfall or drought can increase the chances of a subsidence forming. They are considered a geological hazard with the potential to cause damage to properties, roads, and structures. They have even caused injuries to include loss of life.

### DANGERS IN DEPTH

There is no way to know in advance if your home/business/property will be affected by a subsidence. However, there are maps available which show where previous subsidences have been reported.

### FIXING A SUBSIDENCE

It can be costly to repair damages caused by a subsidence. It is important to check with your insurance company in advance to verify your coverage.

If you believe that you have a depression, a sinkhole, or a subsidence on your property, it is vital that you keep your distance and call the proper authorities to verify that the land is stable. Your insurance company should send the appropriate professionals to survey, take soil samples, and establish a plan of action to begin repairs.

### HOW SINKHOLES FORM
